

This course will help teachers gain a deeper understanding of the NEW Course Framework for AP Statistics. We will focus on effective strategies for helping students master the essential concepts and skills of AP Statistics. We'll examine NEW resources and supports for classroom instruction, assessment, and AP exam preparation available in August via AP Classroom: Personal Progress Checks, Progress Dashboard, and AP Question Bank. In addition, we will discuss issues related to planning and administering the course, such as student selection, pacing, the AP Audit, technology, and projects.
